

ArduCam

Arducam Camera Case

U6251

A neat camera enclosure with an integrated tripod mount, compatible with Arducam and official Raspberry Pi cameras.

These cases are designed to provide a safe home for an Arducam 16MP Autofocus camera, but you can also use them to protect a V1, V2 or NoIR official Raspberry Pi camera. There's a handy tripod mount on the underside, so you could attach one to something like a flexible camera tripod for an inexpensive posable camera mount.

Pi cameras can be vulnerable to static, so an enclosure to protect them from accidental touches and knocks and scrapes is a great idea. Please note that there's a bit of gap around the lens (particularly with the official Raspberry Pi cameras), so these cases won't protect against water or very dusty environments.

- Tripod mount: 1/4"-20
- Compatible with Arducam 16MP Autofocus camera and Raspberry Pi camera module v1, v2 and NoIR.
- Durable ABS construction
