Product Information- Production Change Notice

Change in Switching Elements

Series 31, 51, 52, and 55 (Swisstac)

Contact
EAO Corporation
One Parrott Drive
Shelton, CT 06484

Optimization of Switching Elements used in EAO series 31, 51, 52, and 55.

Due to the various plastic materials used to manufacture the switch elements used in the above listed series, a change in plastic to standardize and optimize production is in process. The phase in of the new material will occur over the next 12 months.

1. Change in appearance - New material - Different color

The plastic material will be changed from Rynite (PET) and Duroplast (DAP) to Frianyl which is a polyamide. With the change in material is a change in color. Previously produced in blue, gray and green, the new switch elements will be only produced in black.

2. Change in electrical rating

There will also be a change/standardization in the current rating from 6A at 250VAC to 5A at 250VAC.

3. Change in part numbers

To preserve the UL certification, there has to be a different part number assigned to differentiate between the 5A and 6A products. For this reason we have assigned new part numbers for the reclassified 5A products.

4. Availability

We will continue to accept and ship orders for the old part numbers based on availability of stock. Once the stock of the old switch elements is depleted, only the new switch elements will be supplied under the new part numbers.

The new part numbers are also available to order at this time should you not want to wait to make this change.

5. Part Numbers affected

See attached list for complete part number listing of affected products. Items in **bold** represent items that have a sales history in North America.

Old Part Number	New Part Number	Description
51-361.022D	51-361.F22D	Keylock switch 3 positions main-0-main SPE 2NC+2NO ST/PT 18x24 gold/silver A
51-361.022DF	51-361.F22DF	Keylock switch 3 positions flush mounting main-0-main SAE 2NC+2NO ST/PT 24x30 A
