Re: Product Change Notification for ThingMagic® USB Pro and Development Kit

Dear Valued Customer,

JADAK recognizes the importance of maintaining a continuous supply of products and minimizing disruption to our customer designs. The ThingMagic® USB Pro reader and the related Development Kit have been very popular with our customers and JADAK intends to continue to supply these products. However, the RFID modules inside these products have been recently updated, and as a result the product must also be updated.

Below you will find answers to many of the questions we anticipate you may have:

What part is changing?	USB-6EP and USB-6EP-DEVKIT products
Why are we changing these parts?	Both products have been updated since the RFID module within them has been updated.
Description of the Change	Both products will utilize updated RFID modules. These updated products require the use of updated firmware (M6emApp-daily-AHAB-1.D.0.19-2020-09-18-1508.sim). Previous versions of the firmware are not compatible with these updated products.
Is it a fit, form and function replacement?	Yes
Is there a cost impact with this change?	No
How will these changes affect the operation of the unit?	Existing products do not need a firmware update. Updated products will come with the updated firmware.
Will this change affect customer certifications?	No
How to recognize the change at the reader level?	Old assembly number: 540-0122-01 New assembly number: 540-0122-02* (* please refer to the back of the plastic enclosure underneath the rubber boot)

Thank you for your continued partnership. If you have any questions/concerns regarding this change, please contact your JADAK representative.

Yours sincerely,

Chandrashekar Shastry
RFID Product Manager
