

IS31BL3231

FLASH LED DRIVER

July 2015

GENERAL DESCRIPTION

The IS31BL3231 is a current-regulated charge pump and ideal for powering high brightness LEDs for camera flash and torch applications. The charge pump can be set to regulate two current levels for FLASH and TORCH modes. The IS31BL3231 automatically switches between linear and boost modes ensuring that LED current does not depend on the LED forward voltage.

IS31BL3231 provides low cost, space saving solution for driving LED. It also integrates thermal and short circuit protection function.

IS31BL3231 is available in DFN-10 (3mm × 3mm). It operates from 2.7V to 5.5V over the temperature range of -40°C to +85°C.

FEATURES

- Operates from 2.7V to 5.5V
- Up to 90% efficiency in Torch Mode
- Output current up to 750mA
- Adjustable output current in Flash Mode
- Minimum external components, no external inductor required
- Automatic boost mode
- Less than 1µA shutdown current
- Low ripple and EMI
- Over voltage protection on output
- Short and over temperature protections
- Available in DFN-10 (3mm × 3mm) package

APPLICATIONS

- White LED backlighting
- Cellular phones
- Generic lighting/flash/strobe applications

PIN DESCRIPTION

No.	Pin	Description
1	VCC	Power supply.
2	CP	Positive input for external flying cap.
3	CN	Negative input for external flying cap.
4	FLASH	Input pin to toggle operation between Flash Mode and Torch Mode.
5	EN	Shutdown control input and Torch reference select pin. The intensity can be modulated by PWM signal via EN pin. It is recommended to use 100Hz and 5%~95% duty cycle PWM signal.
6	RSET	Set the FB voltage in Flash Mode. $V_{FB} = (1.25V / R_{SET}) \times 11.2k\Omega$
7	FB	Feedback input for the current control loop. $I_{LED} = V_{FB} / R_{FB}$
8	SGND	Internal ground pin.
9	PGND	Power ground pin.
10	VOUT	Charge pump output voltage.
	Thermal Pad	Connect to GND.

APPLICATION INFORMATION

GENERAL DESCRIPTION

The IS31BL3231 is a current-regulated charge pump and ideal for powering high brightness LEDs for camera flash and torch applications.

CHARGE PUMP

The charge pump converter boosts input supply voltage (V_{CC}) up to a higher output voltage (V_{OUT}) to drive LED.

The charge pump converter only requires three external components: supply decoupling capacitor, output bypass capacitor and flying capacitor.

Choose low ESR capacitors to ensure the best operating performance and place the capacitors as close as possible to the IS31BL3231.

The charge pump will start up automatically to offer a higher output voltage when V_{FB} is lower than the setting value.

CURRENT SETTING

The LED current is set by the external resistor, R_{FB} , following the Equation (1) below.

$$I_{LED} = V_{FB} / R_{FB} \quad (1)$$

V_{FB} is calculated by the Equation (2) when IS31BL3231 operates in the Flash Mode. V_{FB} is set in the Table 1 when IS31BL3231 operates in the Torch Mode.

OPERATING MODE

FLASH MODE

By pulling the FLASH pin to high, IS31BL3231 operates in the Flash Mode. V_{FB} is set by the R_{SET} .

$$V_{FB} = (1.25V / R_{SET}) \times 11.2k\Omega \quad (2)$$

For example, in Figure 1,

$R_{FB} = 0.22\Omega$, $R_{SET} = 88.7k\Omega$,

So, $V_{FB} = (1.25V / 88.7k\Omega) \times 11.2k\Omega \approx 158mV$

$$I_{LED} = 158mV / 0.22\Omega \approx 718mA$$

The maximum V_{FB} shouldn't be over 550mV or the actual current will be large difference from then calculated current.

TORCH MODE

By pulling the FLASH pin to low, IS31BL3231 operates in the Torch Mode. The V_{FB} is controlled by Pulse Count Control (PCC wire) serial interface. The interface records rising edges of the EN pin and decodes them into 8 different states. The 8 voltage level settings available are indicated in Table 1.

Table 1 V_{FB} Control

Pulse	V_{FB} (Typ.)	I_{LED} (Typ.)	
		$R_{FB} = 0.22\Omega$	$R_{FB} = 1\Omega$
1	50mV	227mA	50mA
2	60mV	273mA	60mA
3	70mV	318mA	70mA
4	85mV	386mA	85mA
5	100mV	455mA	100mA
6	120mV	545mA	120mA
7	140mV	636mA	140mA
≥ 8	170mV	773mA	170mA

TIMING CONTROL

The EN pin should be configured as the Figure 11. t_{LAT} is the latch time. High level should be at last t_{LAT} to active the pulse signal. t_{OFF} is the shutdown time. EN pin is pulled low at last t_{OFF} the IC will be shutdown.

Figure 11 EN pin timing

THERMAL PROTECTION

The IS31BL3231 has a thermal protection circuit that will shut down the chip if the die temperature rises above the thermal limit until the temperature falls down.

RECOMMENDED LAND PATTERN

Note:

1. Land pattern complies to IPC-7351.
2. All dimensions in MM.
3. This document (including dimensions, notes & specs) is a recommendation based on typical circuit board manufacturing parameters. Since land pattern design depends on many factors unknown (eg. user's board manufacturing specs), user must determine suitability for use.
