- Product Description: 4.3" IPS TFT w/ Resistive Touch
1. TFT Driver IC: SC7283
 2. TFT Interface: 24-Bit RGB
 3. TFT Power Requirement: 3.3V, Backlight: 40mA (25.6V (Typ))
 4. Optical Features: Normally Black, Transmissive, 1000 cd/m²
 5. TFT Mating Connector: 40pin, 0.5mm pitch; Ex.Molex 54104-4031
 6. FPC: EMI Shielded FPC Cable

RGB Interface Mode Selection

The Sitronix SC7283 driver IC is user configurable for DE Mode, SYNC mode, or SYNC-DE mode RGB interface.

DE Mode is enabled when HSYNC and VSYNC signals are set to logic-low state, and DE signal is toggled high for valid pixel data. Data is clocked in using DCLK signal. DE mode is recommended to enable the SC7283 driver IC to synchronize the display image on TFT panel without depending on specific horizontal and vertical sync timing from host controller.

SYNC mode is enabled when the DE signal is set to logic-low state, and HSYNC and VSYNC signals are used to explicitly define the horizontal and vertical sync timing to synchronize the display image on TFT panel. Data is clocked in using DCLK signal. Any change to the HSYNC or VSYNC values may prevent the image from correctly appearing on the display.

SYNC-DE Mode is enabled when HSYNC and VSYNC signals are used to explicitly define the horizontal and vertical sync timing to synchronize the display image on TFT panel. DE signal is used as an additional indicator for transmission of valid pixel data. Data is clocked in using DCLK signal. Any change to the HSYNC or VSYNC values may prevent the image from correctly appearing on the display.
