

To: Greenlee Sales & Customer service
From: Jae Lee, Product Manager- Hand tools
Subject: Discontinue FL2C and FL2AAF flashlight
Date: 1/8/16

I was notified from the supplier that they can no longer supply FL2C aluminum LED flashlight and FL2AAF flexible LED flashlight to Greenlee. I'm going to discontinue these two items; therefore, they will be in the phase out status until the rest of the inventory runs out. You will be able to order these flashlights until the inventory reaches zero.

Please inform customers that the FL2C Aluminum LED flashlight can be replaced by either the FL2D or FL2AA. The FL2D Aluminum LED flashlight uses (2) D Alkaline batteries and is a little larger than the FL2C. However, it has the same brightness of 85/30 lumens. The FL2AA uses (2) double A Alkaline batteries and produces 20 lumens. Its small size is an advantage because it is easy to carry.

Please note that Greenlee does not have a replacement flashlight for the FL2AAF flexible LED flashlight. I'm in the process of developing the replacement flashlight to support the market as soon as possible.

I will be more than happy to answer any questions regarding these items. Please feel free to call or email me if you have any questions.
