

Pending End of Life Notice (Pending EOL)

Date: January, 21, 2016

To: Claudia Prebeck, Klaus Mansfield, Sara Tsang, Janet Wong, Alicia Peterson, Dave Campbell, Warren Mitch, Michael Nevedomsky, and Dennis McNamara.

Reference: This notice is to inform you about one or more Stewart Connector part numbers that are planned to go EOL. For any further questions about these parts, please contact me at any time.

Part Numbers going EOL/OBSOLETE:

SS-66800-049F and SS-718804S-A-NF-AC (SS-71800-039) (Prints attached)

Reason for EOL:

Both of these parts use an old style of shield that is no longer in use on our other connectors and is no longer designed in on new connectors. This shield is made in the US shipped to China to be plated and then used to assemble these connectors. With the low usage on these two connectors the MOQ, required for this shield, is high.

Possible Replacement Part Number:

The following part numbers the possible replacements for the parts going EOL:

P/N SS66800-026F is offered as a replacement for P/N SS66800-049F. (Prints of both attached)

P/N SS-71800-117 is offered as a replacement for P/N SS-71800-039. (Print of both attached)

The replacement part numbers use the current shield designed into our products today.

Last time Buy Offered:

Yes....we would offer a LTB on either part while the current, old style shield is available but only to the extent of the quantity of shields available and on a first come first served basis. We would not want to place orders for additional old style shields.

Estimated Implementation Date:

We will advise the final effectivity date once we get responses form the current users of these two parts and can ascertain when the current supply will be used up.

Please contact all customers that you have for these two parts and and share the attached drawings so they can approve /plan their migration to the new part number and provide any feedback they might give us as soon as possible. I have also included the sales information for 2014 and 2015.
