Re: Manufacturing Process Change Notification (PCN) for GS2100MIE and GS2100MIP Modules

This letter is to inform you of our transition plan from current version of modules to a new version as outlined in the table below and the attached PCNs, and to offer you guidance for communication with your customers using GainSpan's modules.

Module	Current Version	New Version
GS2100MIE	V3.2	V3.3
GS2100MIP	V3.2	V3.3

Please note that the new version of the modules is a manufacturing yield improvement and a drop-in replacement for the current version. No hardware change is needed to existing products using the current version, to accommodate the new version. Existing software based on GEPS 5.1.x will work seamlessly with the new version of GS2100MIE and GS2100MIP modules. GainSpan recommends using the latest available "GA" level firmware on all it's products.

We will begin a running manufacturing change to the revised modules as we deplete our current inventory and WIP of modules and we are soliciting your help in making that transition as smooth as possible with your customers.

Please inform all your customers, by sending them the appropriate Process Change Notification. To the extent possible any given shipment will include only one version of the product but it might include a mix of the two versions.

Sincerely,

Brent Little
VP of Marketing
GainSpan Corporation
