Summary

In May 2021 Sierra Wireless (“SWI”) had published the application note “3G Network Sunset Plan For Sierra Wireless Modules”. To accommodate the AT&T 3G network sunset, followed by the application note #4134833, SWI is updating all affected SKUs in the product families to Data Centric as follow:

- HL7588
- HL7688
- WP7603, WP7603-1
- WP7610
- WP7611, WP7611-1
- WP7504

The changes will not affect any hardware or RF performance and will not impact regulatory and carrier certifications.

Change details

Those affected SKUs currently configured as Voice Centric in the “Mode of Operation for EPS” will be configured to Data Centric through the SKU update.

The SKU update has no impact on the form, fit, or function of the modem. There is no hardware or RF performance degradation and no impact on regulatory and carrier certification. The SKU update will simply allow the module to be compatible with AT&T infrastructure after the 3G network is sunset.

The modem firmware (e.g. SWI9X07Y_02.37.03.00) of each SKU remains unchanged corresponding to the modem firmware.

All following active SKUs currently configured as Voice Centric will be updated to Data Centric through SKU update process at the SWI factories.
