

• Ideal for European 433.92 MHz Transmitters

- · Very Low Series Resistance
- · Quartz Stability
- Surface-Mount Ceramic Case
- Complies with Directive 2002/95/EC (RoHS)
- Tape and Reel Standard per ANSI/EIA-481

The RO3101A-14 is a true one-port, surface-acoustic-wave (SAW) resonator in a surface-mount, ceramic case. It provides reliable, fundamental-mode, quartz frequency stabilization of fixed-frequency transmitters operating at 433.92 MHz. This SAW is designed specifically for remote-control and wireless security transmitters operating in Europe under ETSI I-ETS 300 220-1.

Absolute Maximum Ratings

Aboolate maximum ratings							
Rating	Value	Units					
CW RF Power Dissipation (See: Typical Test Circuit)	+0	dBm					
DC Voltage Between Terminals (Observe ESD Precautions)	±30	VDC					
Case Temperature	-40 to +85	°C					
Soldering Temperature (10 seconds / 5 cycles maximum)	260	°C

CAUTION: Electrostatic Sensitive Device. Observe precautions for handling. NOTES:

- 1. The design, manufacturing process, and specifications of this device are subject to change.
- 2. US or International patents may apply.

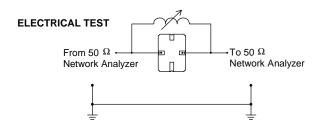

Electrical Connections

The SAW resonator is bidirectional and may be installed with either orientation. The two terminals are interchangeable and unnumbered. The callout NC indicates no internal connection. The NC pads assist with mechanical positioning and stability. External grounding of the NC pads is recommended to help reduce parasitic capacitance in the circuit.

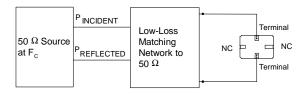

Typical Test Circuit

The test circuit inductor, L_{TEST} , is tuned to resonate with the static capacitance, C_O , at F_C .

Temperature Characteristics

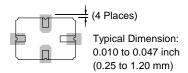

The curve shown on the right accounts for resonator contribution only and does not include LC component temperature contributions.

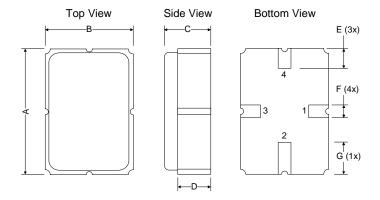

Typical Circuit Board Land Pattern

The circuit board land pattern shown below is one possible

design. The optimum land pattern is dependent on the circuit board assembly process which varies by manufacturer. The distance between adjacent land edges should be at a maximum to minimize parasitic capacitance. Trace lengths from terminal lands to other components should be short and wide to minimize parasitic series inductances.

Recommended Reflow Profile

- 1. Preheating shall be fixed at 150~180°C for 60~90 seconds.
- 2. Ascending time to preheating temperature 150°C shall be 30 seconds min.
- 3. Heating shall be fixed at 220°C for 50~80 seconds and at 260°C +0/-5°C peak (10 seconds).
- 4. Time: 5 times maximum.
