Date: January 12, 2010
To: KS & KSL Series Customers
Subject: PowerStor® KS Series and KSL-3R3703E-R End-of-Life Notice

Effective immediately, the Cooper Bussmann® PowerStor® supercapacitor part numbers KS-2R8334-R, KS-3R3224-R and KSL-3R3703E-R are discontinued.

As part of our continuing process to offer industry leading solutions, the **KS** Series is replaced by new, low profile **KSR** Series.

The KSR Series maintains the same electrical performance, footprint and board layout as that of the KS Series, but with a reduced height of 1.8mm.

Since its launch, the KSL Series KSL-3R3703S-R part number has been hugely popular. As such, it's been decided this will become our standard offering in this form factor. Applications using the KSL-3R3703E-R need to transition to the KSL-3R3703S-R.

In order to minimize customer inconvenience during this transition, we will accept "End-of-Life" orders through January, 2010. Any orders will be consolidated in to a final production run for each of the three affected part numbers.

The official **End-of-Life date is March 31, 2010.**

Please plan accordingly for the end of production of these part numbers. Cooper Bussmann personnel will assist with implementation as required.

I thank you for your cooperation.
