## **PARTS CHANGE NOTIFICATION**

**PART NUMBER: AC15WNA-R**

This document is to clarify the change in the AC power cord part number AC15WNA-R, also referred to as AC15WNA and/or AC15WNAR. To circumvent the tariffs levied by the U.S. government against parts made in China, in March 2019 the manufacturing location of the AC15WNA-R power cord was moved from China to Thailand. The overmold tools for both the AC plug and the IEC plug at the Thailand factory are different than at the China factory and, therefore, the two power cords appear different.

Along with the physical tooling and appearance differences, the IEC plug of the new version has a snugger fit into IEC receptacles for better retention. Please ensure that the IEC plug is fully inserted into the IEC inlet so as to avoid a loose connection. The connection to the power socket remains the same.

Though physically different in appearance, the part number still remains as AC15WNA-R, though internally Phihong references the new version as AC15WNA(1)-R. Attached are copies of the specifications for the old and new versions of the AC15WNA-R power cord.

Sincerely,

Thomas Chin
