Subject: Announcing Material Change on RTY Series Rotary Position Sensors

Effective June 15, 2015, Honeywell Sensing and Control (S&C) is announcing a bearing material change to the RTY Series of rotary position products. The current metal bearing will be replaced with a polymer composite. This transition improves bearing life, offering wear resistant and self-lubricating properties. All orders scheduled for delivery on or after the June 15, 2015 cutoff date will include this new material.

Products

RTY Series Hall-Effect Rotary Position Sensors
RTY Series without Lever
RTY Series with Lever
