Notice of Specification Change

Customer: All Anaren PCN # 00001
Anaren P/N: 42124-G001/B0430J50100AHF

Notice of Specification Change(s):

Anaren regrets to inform you that a specification change is required for the B0430J50100AHF balun. We are splitting the band into two narrow bands, 400 – 2500MHz and 2501 – 3000MHz. The tables below outline the current specifications and updated specifications on the datasheet.

Current Data Sheet Specifications:

Frequency	Return Loss	Insertion Loss	Amplitude Balance	Phase Balance	Power Handling	Operating Temp.
<i>MHz</i>	<i>dB Min</i>	<i>dB Max</i>	<i>dB Max</i>	<i>Deg Min</i>	<i>Watts Max</i>	<i>°C</i>
400 - 3000MHz	8.4	4.0	1.4	12	0.4	-55 to +105

Waiver Specifications:

Frequency	Return Loss	Insertion Loss	Amplitude Balance	Phase Balance	Power Handling	Operating Temp.
<i>MHz</i>	<i>dB Min</i>	<i>dB Max</i>	<i>dB Max</i>	<i>Deg Min</i>	<i>Watts Max</i>	<i>°C</i>
400 - 2500MHz	8.4	4.0	1.4	12	0.4	-55 to +105
2501 - 3000MHz	7.0	4.0	1.4	12	0.4	-55 to +105

Justification:

When Anaren originally established the specifications for this part, they were based on estimated projections for material and process stability established during low volume pilot builds. As we have increased production quantities, it has become apparent that these projections were too optimistic. The net result is that this part has had consistently poor yield.

Xinger®

Ultra Low Profile 0805 Balun 50Ω to 100Ω Balanced

Description

The B0430J50100AHF is a low cost, low profile sub-miniature unbalanced to balanced transformer designed specifically for differential inputs and output locations on next generation A to D and D to A Converter IC's in an easy to use surface mount package, covering 400 MHz–3000 MHz. The B0430J50100AHF is ideal for high volume manufacturing and delivers higher performance than traditional wire wound baluns. The B0430J50100AHF has an unbalanced port impedance of 50Ω and a 100Ω balanced port impedance. This transformation enables single ended signals to be applied to differential ports. The output ports have equal amplitude (-3dB) with 180 degree phase differential. The B0430J50100AHF is available on tape and reel for pick and place high volume manufacturing. Note that for optimal performance, the B0430J50100AHF should be used with a 10 pF series capacitor on the unbalanced port as shown in p. 2 & 3.

Detailed Electrical Specifications:

Specifications subject to change without notice.

Features:	Parameter	ROOM (25°C)			Unit	
		Min.	Typ.	Max		
<ul style="list-style-type: none"> 400 – 3000 MHz 0.7mm Height Profile 50 Ohm to 2 x 50 Ohm Low Insertion Loss Designed for A-D and D-A Converters Surface Mountable Tape & Reel Non-conductive Surface RoHS Compliant Halogen Free 	Frequency	400		3000	MHz	
	Unbalanced Port Impedance		50		Ω	
	Balanced Port Impedance		100		Ω	
	Return Loss	8.4	9.9		dB	
	Insertion Loss*		3.4	4.0	dB	
	Amplitude Balance		0.7	1.4	dB	
	Phase Balance		7	12	Degrees

	Power Handling @85C			0.4	Watts	
	Operating Temperature		-55		+105	°C

* Insertion Loss stated at room temperature (Insertion Loss is approximately 0.1 dB higher at +85 °C)

Outline Drawing

Typical Performance: 300 MHz. to 3100 MHz. with an external 10 pF capacitor on pin 2

Mounting Configuration:

In order for Xinger surface mount components to work optimally, the proper impedance transmission lines must be used to connect to the RF ports. If this condition is not satisfied, insertion loss, Isolation and VSWR may not meet published specifications.

All of the Xinger components are constructed from organic PTFE based composites which possess excellent electrical and mechanical stability. Xinger components are compliant to a variety of ROHS and Green standards and ready for Pb-free soldering processes. Pads are Gold plated with a Nickel barrier.

This component requires a 10 pF capacitor to be mounted in front of the unbalanced port (Pin 2) of the balun as shown in the drawing below for optimum performance. The capacitor should be placed as close as possible to the balun to minimize transmission line effects as shown in the suggested PCB footprint below.

An example of the PCB footprint used in the testing of these parts is shown below. In specific designs, the transmission line widths need to be adjusted to the unique dielectric coefficients and thicknesses as well as varying pick and place equipment tolerances.

Packaging and Ordering Information

Parts are available in reel and are packaged per EIA 481-D. Parts are oriented in tape and reel as shown below. Minimum order quantities are 4000 per reel.

Direction of
Part Feed
(Unloading) 

QUANTITY/REEL	REEL DIMENSIONS mm	
4000	ϕA	177.80
	B	8.00
	ϕC	50.80
	ϕD	13.00
