Subject: 12BL6MX Connector

Switchcraft offers a variety of DIN connectors as commodity items. Every attempt is made to maintain consistent product configuration, however, some minor physical characteristic changes between suppliers are unavoidable. The current offering of 12BL6MX has been available since mid 2012 and there is no plan to change suppliers for this connector in the near future. Every supplier product is evaluated for the basic form, fit and function criteria. The interface to the mating connector and any mounting provisions are held critical. Other minor variations in appearance, terminal shape, insulator material or shape, surface finishes and/or screw head configuration may be allowed in an effort to minimize supply interruptions. The available configuration of 12BL6MX is compatible with 6 @ 240° type DIN connectors.

A handwritten signature in black ink, appearing to read "Brian Smeenge".
