

Breakout Garden Extender Kit (3 pairs)

- PIM416
 - Use these extenders with some female-to-female jumper jerky (available separately) to extend the reach of your Pimoroni breakouts.

- This kit contains **three Breakout Extenders**, that you can slot Pimoroni breakouts into, and **three Garden Extenders**, that slot into Breakout Garden slots. Connect them using female-to-female jumper jerky and extend where your breakouts go!
- The Breakout Extenders also let you use Pimoroni breakouts without Breakout Garden by popping a breakout into the socket and connecting them directly to your Pi, Arduino, or other micro controller with jumper jerky. You can also use the Breakout Extender sockets directly in breadboards to use our breakouts for prototyping.
- Use the Garden Extenders to use other breakouts with Breakout Garden. They pop into the slots on Breakout Garden and connect with jumper jerky to an I2C breakout.
- If you don't already have some, then add some jumper jerky as an "Essential extra".
- *Raspberry Pi, Breakout Garden HAT, jumper jerky, and breakout shown not included.*
