

LDX-B20

150J Buffer Module

The LDX-B20 is a microprocessor controlled buffer unit rated 20 A usable in 12 V, 24 V, 48 V and 72 V systems.

The LDX-B20 monitors the voltage coming from a DC power supply and in case of failure a capacitor bank is used to keep the output regulated for at least 300 ms at full load.

Key Features & Benefits

- Wide voltage range 12 - 85 VDC
- Compact size
- DC BUS voltage self-tracking
- Boost Max peak power of DC supply
- Multiple protections
- Digital regulation
- Reliable topology, based on standard electrolytic capacitors
- > 150 Joules energy storage
- Integrates low power step-up (boost) converter to charge the capacitor bank
- Integrates 20 A step-down (buck) converter to discharge the capacitor bank at an adjustable output voltage in case of mains failure
- Relays dry contact and an opto-isolated input for inhibit
- Integrated safety circuit that disconnects the capacitor bank in case of internal failure
- Parallelable for power and backup time increase
