

# PRODUCTION ACTION

**PRODUCTION4ACTION** developed by **DECIDE4ACTION** is a cost effective approach to automatic data capture that allows the line operators to supplement, rather than create, the production information using a simple and reliable automatic data collection system.

Gain real-time data capture of an entire production environment and even individual critical machines. **PRODUCTION4ACTION** lets clients choose level of desired monitoring.

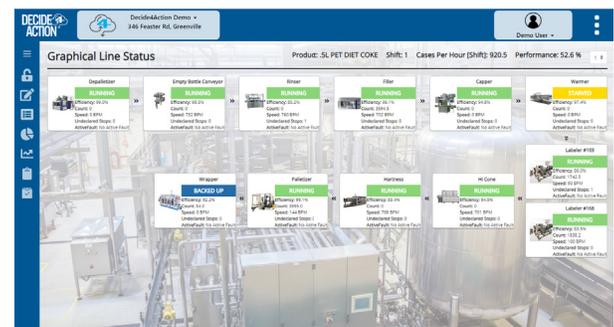

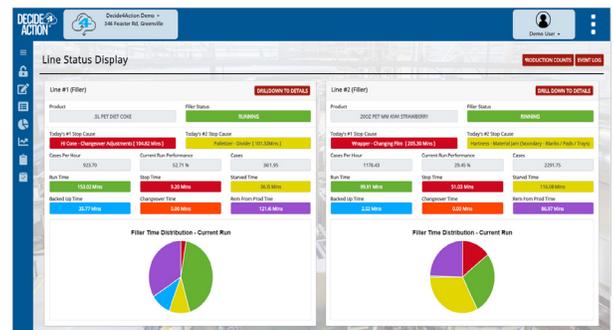

# DECIDE4ACTION

## KEY FEATURES

- Determines the real bottlenecks and trouble spots in the process
- Capable of deriving data from existing network capable PLC hardware
- Automatically maintains an event log for each stop by production line
- Easy to use requiring little operator training
- Easily accommodates the seamless integration with other software modules
- Measurement tool for reviewing performance over time.
- Real-time analysis of performance indicators
- Metrics focus on OEE—how effective manufacturing equipment is utilized
- Track mechanical maintenance utilization for mechanics performing electrical / mechanical breakdowns as well as other downtime repairs
- Measure shift performances by line for team comparisons and accountability
- More accurate measurement of changeover time
- Capital Improvements – Determine areas which need improvements. Justification for capital expenditures through data analysis.
- Training Issues – Determine issues through downtime analysis
- PM Schedule – Determine if you have adequate PM program as well as pinpoint recurring issues. Revise your PM program for existing assets or machinery
- Improve scheduling through historical analysis of change times

Several deployment options to meet your exact needs

 <p><b>SAAS</b></p> <p>Cloud Platform Web-based service</p> <p>Monthly Subscription Licensing model with set-up and implementation costs</p> <p>No 3rd party hardware required</p>	 <p><b>CLOUD</b></p> <p>Cloud Platform Web-linked service Choice of hosting options</p> <p>Combo CAPEX and annual subscription licensing service and maintenance charges</p> <p>Minimal additional hardware needed</p>	 <p><b>ON PREMISE</b></p> <p>Traditional infrastructure Servers on site Hosted by client</p> <p>CAPEX model with annual maintenance and service licensing charges</p> <p>Requires platform hardware and infrastructure</p>
