

## tSH-700 Series

Tiny Serial Port Converter / Sharer with PoE

### Features

- Supports Baud Rate and Data Format conversion application
- Read-cache ensures faster response
- Redundant power inputs: PoE and DC jack
- Tiny form-factor and low power consumption
- Supports Modbus RTU/ASCII protocol conversion
- Raw data mode for most query-response protocols
- Built-in web server for easy configuration (HTTP)
- Power or Signal isolation for i versions

### Introduction

The tSH-700 module provides a number of functions, including "Baud Rate and Data Format Conversion", "Modbus RTU/ASCII Conversion" and "Two Masters Share One Slave". The built-in web server provides easy configuration interface, and no console commands are required.

#### Baud Rate Conversion:

This function allows a single master device to communicate with slave devices using different baud rates and data formats. Most query-response protocols (half-duplex), e.g. DCON, are supported in the raw data mode. Full-duplex communication should also work when the data size is smaller than the built-in 512 bytes buffer on each serial port.

#### Modbus RTU/ASCII Conversion:

This function allows a single Modbus RTU/ASCII master device to communicate with Modbus RTU/ASCII slave devices using different protocols, baud rates and data formats.

#### Two Masters Share One Slave (for tSH-73x Series Only):

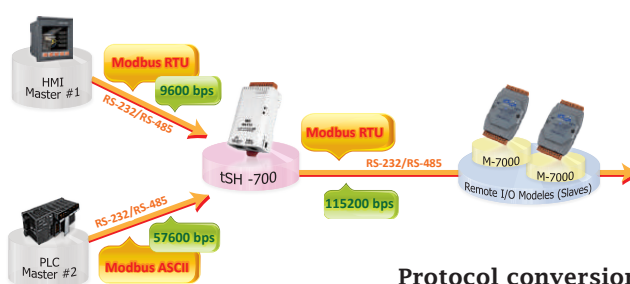

This function allows two master devices connected to different serial ports to share slave devices. The queries from the masters are queued in the tSH-700 module and then processed one-by-one. Modbus mode can be used to convert the Modbus RTU/ASCII protocols, while raw data mode can be used for DCON or other query-response protocols. Different baud rates and data formats can also be used on the different serial ports.

Raw data communication

#### Read-Cache Function:

The built-in read-cache function is used to store previous requests and responses of the Modbus messages in the memory buffer of the tSH-700 module. When other HMI/SCADA master controllers requiring the same information from the same slave RTU device, the cached response is returned immediately. This feature dramatically reduces the loading on the slave serial port communication, ensures faster responses to the master, and improves the stability of the entire system.

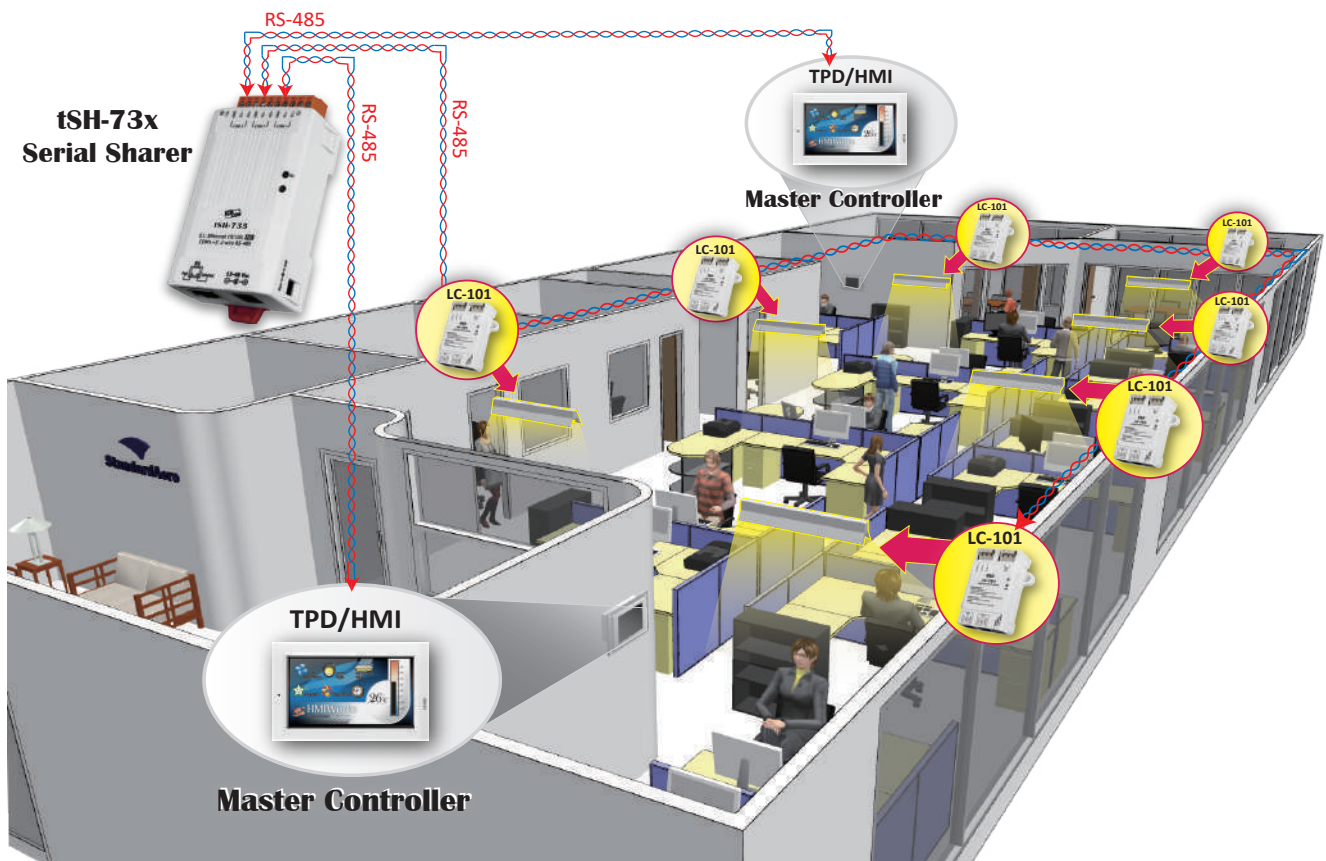

Protocol conversion

## Applications

### Accessing a Process Controller from Local Panel and Control Center

### Control Office Lightings from Two HMI Devices (Masters) in Different Places

## Specifications

Models	tSH-722 tSH-722i	tSH-732 tSH-732i	tSH-725 tSH-725i	tSH-735 tSH-735i	tSH-724 tSH-724i	tSH-734 tSH-734i
<b>System</b>						
CPU	32-bit MCU					
<b>Communication Interface</b>						
Ethernet	10/100 Base-TX, 8-pin RJ-45 x 1, (Auto-negotiating, Auto-MDI/MDIX, LED indicator)					
PoE	IEEE 802.3af, Class 1					
COM Port	2 x RS-232	3 x RS-232	2 x RS-485	3 x RS-485	1 x RS-485 1 x RS-232	1 x RS-485 2 x RS-232
Self-Tuner	-		Yes, automatic RS-485 direction control			
Power Isolation	1000 VDC for only tSH-722i/ 732i					
Signal Isolation	3000 VDC for only tSH-725i/ 735i /724i /734i					
ESD Protection	+/-4 kV					
<b>COM Port Capability (16C550 or compatible UART)</b>						
Baud Rate	115200 bps Max.					
Data Bit	5, 6, 7, 8					
Parity	None, Odd, Even, Mark, Space					
Stop Bit	1, 2					
<b>Power</b>						
Power Input	IEEE 802.3af, Class 1 for PoE; +12 ~ 48 VDC for DC Jack					
Power Consumption	0.07 A @ 24 VDC					
<b>Mechanical</b>						
Connector	10-pin Removable Terminal Block x 1					
Dimensions (W x H x D)	52 mm x 95 mm x 27 mm					
Installation	DIN-Rail mounting					
Case	Plastic					
<b>Environment</b>						
Operating Temperature	-25 °C ~ +75 °C					
Storage Temperature	-30 °C ~ +80 °C					
Humidity	10 ~ 90% RH, non-condensing					

## Pin Assignments

	tSH-722(i)	tSH-724(i)	tSH-725(i)	tSH-732(i)	tSH-734(i)	tSH-735(i)
